

Name: _____ BCS _____ Date: _____

For Food:

- Feed a senior pelleted diet (LMF Senior, Purina Senior, Nutrena Senior, or any other brand name equine senior feed). Feed about 2-3 pound twice daily.
 - Or:

- Feed pelleted rice bran about 1-2 cups twice daily.
 - Or:

- Feed about 1 cup of corn oil once to twice daily.
 - Or:

- Feed as much hay as wanted.

For sand in the gastrointestinal tract:

- Feed psyllium (Any brand name: EquiAid, SandClear, etc).
- Feed once cup once daily for seven consecutive days every month (Ex: 1st through the 7th of every month one cup per day. Feed with grain because it is chalky and they sometimes don't like it).

For parasite issues:

Rotate between different drug classes every 2-3 months

Drug Classes	(Brand Names):
• Ivermectin with Praziquantel	(Equimaxx, Zimectrin Gold, Quest Plus, etc)
• Pyrantel	(Strongid, Exodus, etc)
• Ivermectin	(IverCare, Zimectrin, etc)
• Fenbendazole	(Panacur, Safeguard, etc)

A fecal exam is beneficial to determine the parasite load in the horse. It is best to obtain a sample 8 weeks after the last deworming.

Consider a PowerPac if the past deworming has not been consistent. Give twice the body weight of Fenbendazole once daily for 5 consecutive days.

Teeth:

A dental should be done in order to ensure all foods are properly digested. Also, probiotics are helpful to allow for good digestion of feed.
